

ULTRASOUND REPORT

Ultrasound No. 651

Name ANA, RIVERA

Physician : DR. BORAZON

Kind of Examination WHOLE ABDOMEN

Age : 67

Date 8/16/2022

Sex : F

The liver is within normal size with increase parenchymal echogenicity.
The intrahepatic ducts are not dilated. Negative for mass.
The gall bladder shows 0.2 cm. low level echo adhered to the wall without shadowing. The wall is not thickened. The common bile duct is not dilated.
Pancreas and spleen are within normal size and echo texture.
Both kidneys are within normal size. The right kidney measures 9.6 cm. x 5.0 cm. with a cortical thickness of 1.5 cm. and the left kidney measures 10.0 cm. x 4.4 cm. with a cortical thickness of 1.2 cm. The renal parenchymal echoes are within normal. Negative for stones, masses nor hydronephrosis.
The urinary bladder is well distended with smooth wall.
Negative for intravesical echoes.
The uterus is atrophied measuring 3.0 cm. x 2.1 cm. x 1.8 cm.
The myometrial echo pattern is homogeneous. Negative for masses.
Both ovaries were not visualized.
Negative for adnexal mass.

Conclusion :

- > LIVER PARENCHYMAL DISEASE TO CONSIDER FATTY LIVER
- > GALL BLADDER POLYP
- SUGGEST CLINICAL CORRELATION
