No acute parenchymal densities or focal consolidation.

Rightward deviation of the thoracic spine.

*This radiologic interpretation is only a part of the overall assessment of a patient's condition. It must be correlated with the clinical, laboratory and other ancillary parameters for a comprehensive analysis. Therefore, radiology reports are best explained by the attending physician to the patient. Images are available in the PACS for your inspection.*

Wilson T. Tan, MD  
(RADIOLOGIST)
